

120V Compact Vented Dryer

Correct the Auto Dry Malfunction

Tech Tip No. 3001

YOU'LL NEED

Flat Blade Screwdriver
Phillips Head Screwdriver
Needle Nose Pliers

MODELS

AS66VX Ariston™ Dryer by Splendide®

Repairing Auto Dry Malfunction

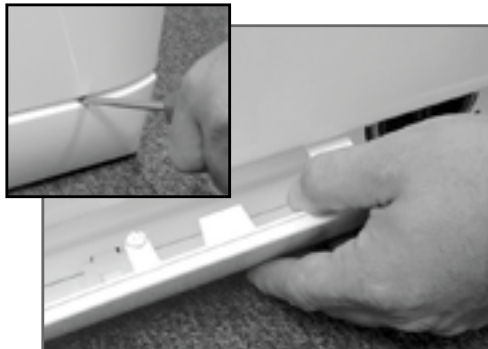

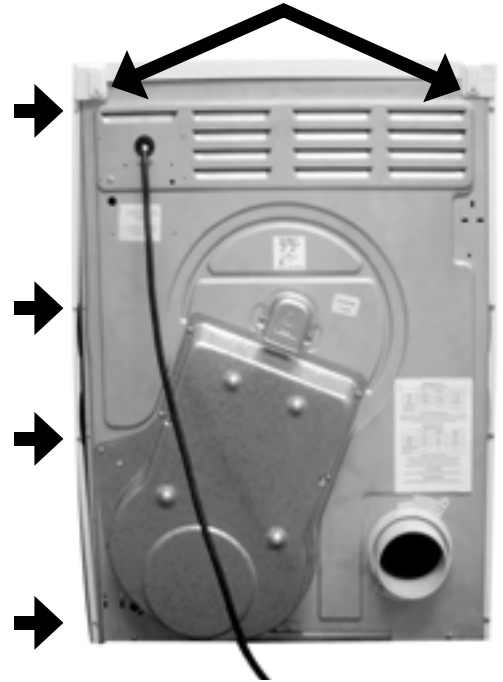

Problem:

Auto Dry Cycle does not stop, or stops before clothes are dry

Solution:

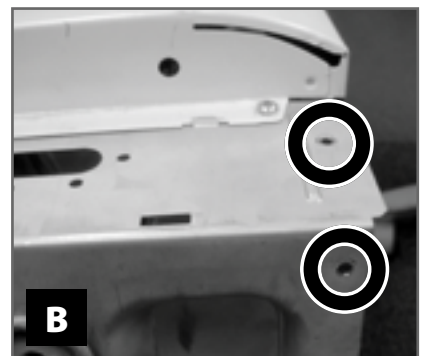

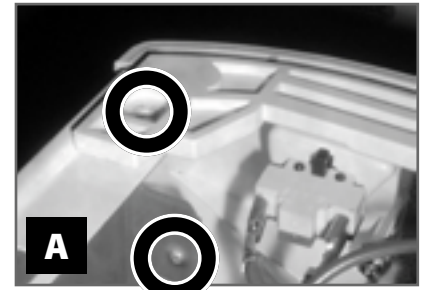

Change the placement of the wires at the Dryer Harness Plug and Heater Plug

1. Two screws secure the dryer top to the case (see right). Remove these screws, then pull the top straight back towards the rear of the dryer to remove it.
2. Eight screws secure the left-side panel to the front and rear panels. First, remove the four screws that secure the side panel to the rear of the case (see right).
3. Next, remove the two screws that secure the side panel to the front of the case (see Fig. A).
4. To access the last two screws, tip the dryer on it's back. Remove

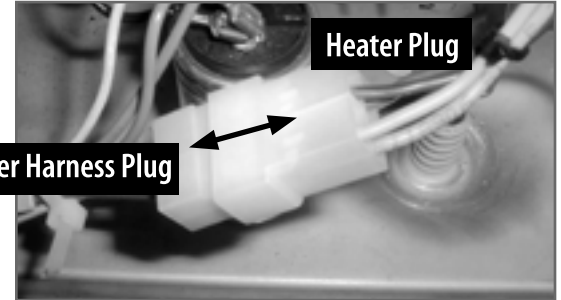

the lower panel by gently easing down the top of the panel with a flat blade screwdriver, then lifting slightly and pulling forward. (see above).

5. After removing the final two screws that secure the side-panel to the case (see Fig. B), slide the side-panel toward the rear, then lift straight up and away from the dryer.

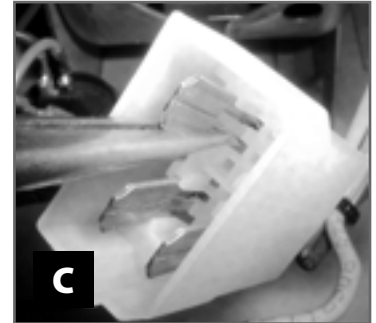

Repairing Auto Dry Malfunction (continued)

6. Tip the dryer back to it's upright position. The Dryer Harness and Heater Plugs can now be seen (see right)

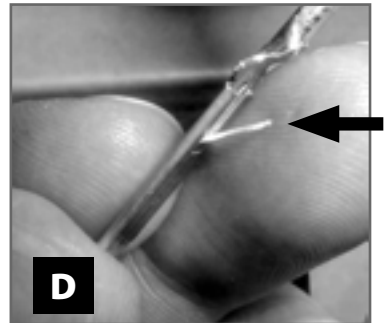

7. Grab each plug and pull straight out to separate them.

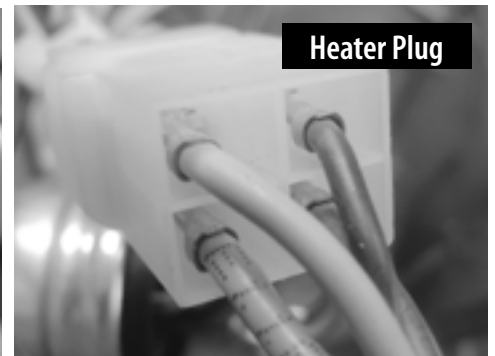

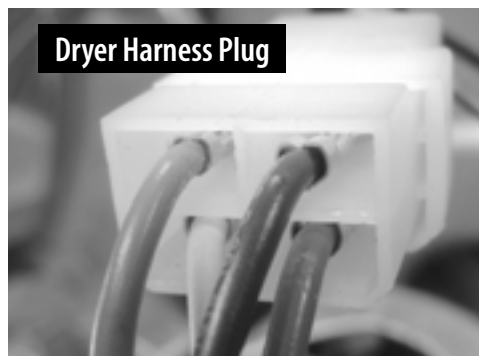

8. Identify the wires that need to be moved by referring to the chart below. **(Example: when plugged together, the RED WIRE on the Dryer Harness Plug should meet with the ORANGE WIRE on the Heater Plug)**

9. To remove a wire from the plug, use needle nose pliers to squeeze the tab (see Fig. C), then pull the wire straight out. **NOTE: Remember to bend the tab back out before pushing it into it's new location on the plug (Fig. D).**

10. Once all wires are properly placed and installed, plug the Dryer Harness Plug back into the Heater Plug and reattach the side panel, lower panel and dryer top. **DONE.**
